INNOVATE, ANALYZE, SUCCEED

CASE STUDIES

Data Projects & Results

What we actually did, the data tools we used, what we collected and how the dashboards we build look.

1500%	40+	15+	2
Peak revenue growth	Countries	Years of experience	Telecom networks

// HOW WE WORK

From raw data to revenue

Both engagements below followed the same methodology we developed over 15+ years working inside telecom data. We don't advise from the outside — we go into the data layer and build the foundation on which analytics, AI and monetization actually work.

01 Data Audit

We map every data source and identify gaps, poor quality and silos. We get a clear picture of what exists and where the quick wins are.

02 Clean & Govern

We build pipelines that clean, deduplicate and standardize the data, and establish quality standards and governance rules.

03 Real-time BI layer

We restructure the architecture and build a unified analytics layer — dashboards, KPI frameworks and reporting leadership can trust.

04 AI & Monetization

On a clean foundation we design the monetization strategy and uncover hidden revenue streams that were invisible without governance.

What we collected (telecom)

Data types we unified into a single model:

- CDR / xDR call records
- Routing & interconnect data
- Billing & revenue records
- Network KPIs / quality
- A2P & SMS traffic
- Traffic & volumes by destination
- Margins & rates per route
- Partner / carrier data

APAC REGION · TELECOMMUNICATIONS

Telecom Network Data Monetization

1500%
REVENUE INCREASE

1150%
GROSS PROFIT INCREASE

Realtime
BI VISIBILITY

0 → 1
MONETIZATION STRATEGY

// THE CHALLENGE

A major telecommunications network in the APAC region was sitting on enormous amounts of traffic and routing data but had no visibility into how that data could drive revenue. Reporting was siloed, data quality was poor and the monetization strategy was non-existent. Revenue was flat despite high traffic volumes.

// OUR APPROACH

We started with a full data audit — mapping every source and identifying gaps. We then cleaned and restructured the data architecture, built automated pipelines and created a real-time BI layer that gave the business visibility it had never had before. On that foundation we designed and implemented a new data-driven monetization strategy.

// THE RESULT

The engagement delivered a complete transformation of the network's revenue performance. Data that was previously invisible became the engine behind a 1500% revenue increase and 1150% gross profit increase. The new data infrastructure continues to generate value long after the engagement concluded.

// WHAT WE COLLECTED

- CDR / xDR records
- Routing data
- Traffic by destination
- Interconnect traffic
- Billing records
- Network KPIs
- Margins per route

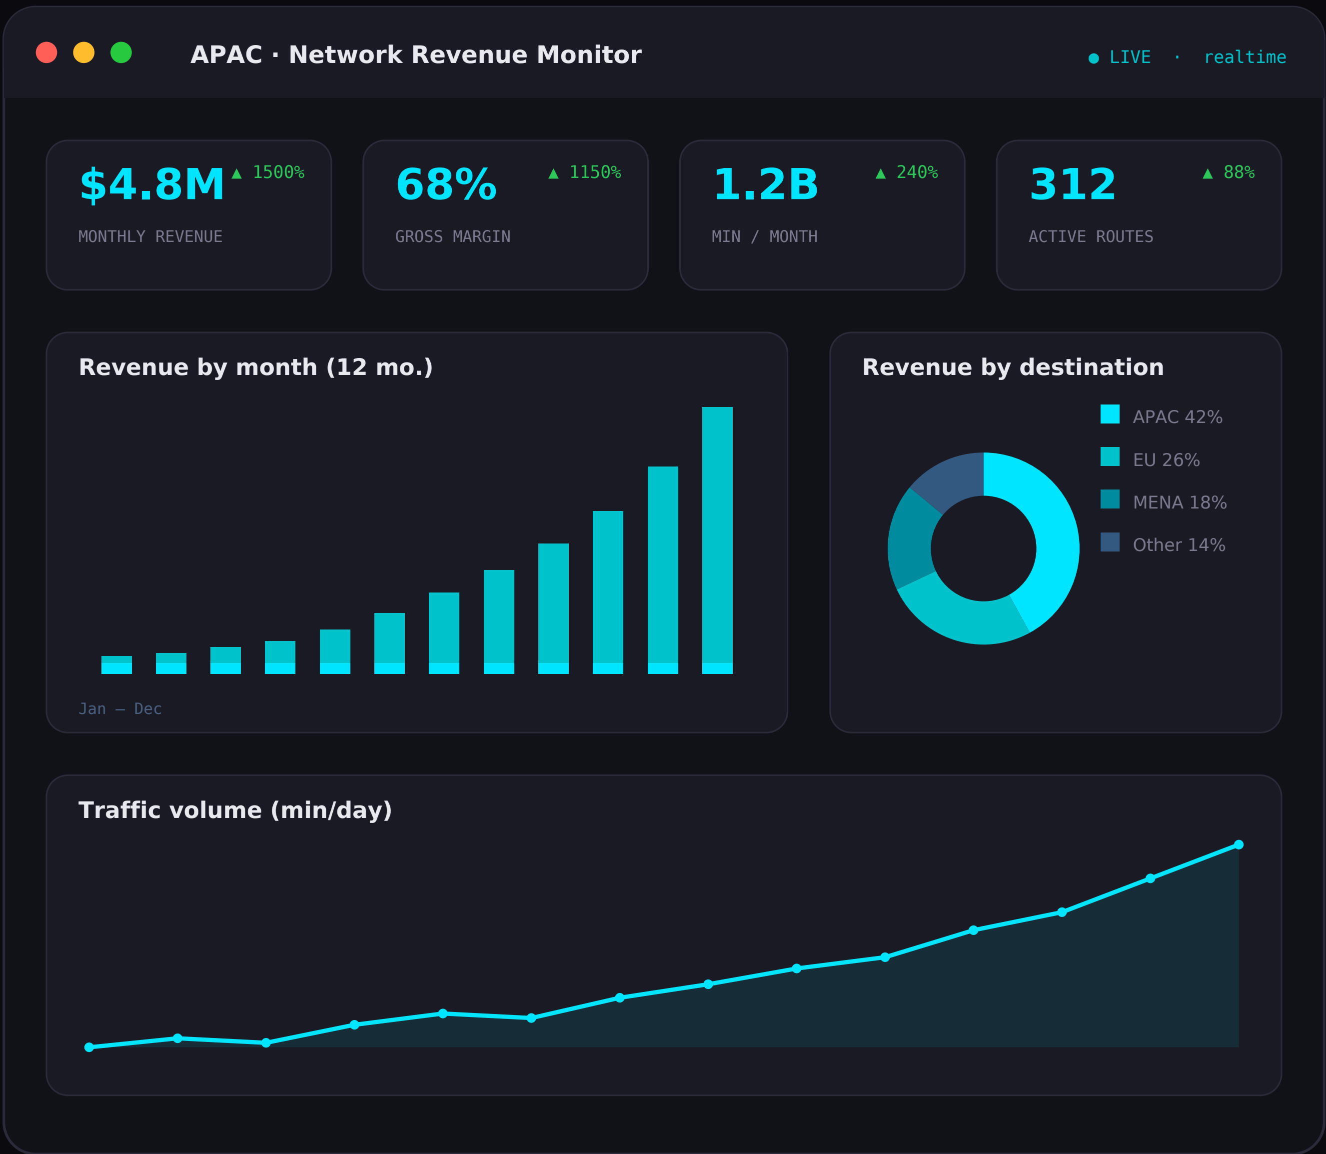
// DATA TOOLS USED ON THIS PROJECT

- QlikSense
- Power BI
- Python
- Pandas
- ETL Pipelines
- PostgreSQL
- Data Modeling
- KPI Frameworks

// WHAT THE DASHBOARD LOOKS LIKE

Network Revenue & Monetization dashboard

The real-time BI layer we built unifies traffic, routing and billing into a single view — from executive level down to the individual route.



Representative, anonymized view — actual client data is confidential.

MENA REGION · TELECOMMUNICATIONS

Telecom Revenue & Data Architecture Overhaul

400%	250%	0	1
REVENUE INCREASE	GROSS PROFIT INCREASE	REPORTING SILOS	UNIFIED MODEL

// THE CHALLENGE

A telecommunications network in the MENA region had significant revenue potential locked inside fragmented, ungoverned data. Multiple systems were producing inconsistent reports, making it impossible to identify where revenue was being lost or where new opportunities existed. The business was operating blind.

// OUR APPROACH

We conducted a comprehensive data audit that uncovered hidden revenue streams — simply invisible without proper data governance. We restructured the entire architecture, eliminated reporting silos, established data quality standards and built a unified analytics layer. A new monetization strategy was then designed based on what the clean data revealed.

// THE RESULT

The project delivered 400% revenue growth and 250% gross profit increase. Beyond the numbers, the business was left with a clean, governed data foundation it could keep building on, and a monetization playbook it could apply across other markets.

// WHAT WE COLLECTED

- CDR records
- A2P / SMS traffic
- Routing data
- Revenue records
- Carrier / partner data
- Rates per route
- Data quality metrics

// DATA TOOLS USED ON THIS PROJECT

- Power BI
- QlikSense
- Python
- ETL Pipelines
- Data Governance
- PostgreSQL
- Data Modeling
- Tableau

// WHAT THE DASHBOARD LOOKS LIKE

Revenue Assurance & Architecture dashboard

After eliminating the silos, the unified analytics layer surfaces revenue leakage, data quality and monetization opportunities in real time.

Representative, anonymized view — actual client data is confidential.

// OUR STACK

The data tools we use

The tools listed on our site, grouped by layer. On the telecom projects the focus was on the BI & Analytics and Data layers — from ETL pipelines and modeling to executive dashboards.

BI & Analytics

- QlikSense
- Power BI
- Tableau
- Google Analytics
- Pandas
- Data Modeling
- ETL Pipelines

AI & Data

- Python
- TensorFlow
- PyTorch
- OpenAI
- LangChain
- Scikit-learn
- Hugging Face

Backend & Cloud

- Node.js
- PostgreSQL
- AWS
- Vercel
- Docker
- REST APIs
- GraphQL

Business & Strategy

- Business Intelligence
- Business Analytics
- KPI Frameworks
- Market Research
- Salesforce
- HubSpot
